"Amendment of the claims under 19(1) (Rule 46)"

Re: International Application No. PCT/JP03/10225

Applicant: KEIHIN CORPORATION

Agents: OCHIAI Takeshi & NIKI Kazuaki

International Filing Date: 11.08.03 (11th August 2003)

Dear Sirs,

The applicant, who received the International Search Report relating to the above identified International Application transmitted on 13.01.04, hereby file Amendment under Article 19(1) as in the attached sheets.

More specifically, the applicant hereby cancels sheet No. 6, and submits herewith new sheets Nos. 6 and 6/1 for replacement, because the intended amendments are to add new claims 5, 6 and 7 to the application. The original claims 1 to 4 are maintained.

Very truly yours,

Takeshi Ochiai (OCHIAI Takeshi)
Registered Patent Attorney in Japan
of Ochiai & Co.

(1) Amendment under Article 19(1) 2 sheets

WHAT IS CLAIMED IS

1. A corrosion-resistant Al-based structural member comprising a base layer (2) adhered to the surface of an Al-based structural member (1₀), and a corrosion-inhibiting coating (3) adhered to the surface of the base layer (2), the base layer (2) comprising Zn, and the corrosion-inhibiting coating (3) comprising a trivalent Cr-containing chromate coating for Zn.
2. A process for producing a corrosion-resistant Al-based structural member, the process comprising a step of forming a base layer (2) comprising Zn on the surface of an Al-based structural member (1₀) by a zincate treatment, and a step of forming a corrosion-inhibiting coating (3) comprising a trivalent Cr-containing chromate coating for Zn on the surface of the base layer (2) by a chromate treatment using a trivalent chromate agent.
3. The process for producing a corrosion-resistant Al-based structural member according to Claim 2, wherein a treatment time t_1 required for the zincate treatment is set at a value that enables the amount of Zn deposited on the surface of the Al-based structural member (1₀) to be increased to give the base layer (2) comprising Zn having a required thickness, and a treatment time t_2 required for the chromate treatment is set at a value that enables the trivalent Cr-containing chromate coating for Zn to be reliably formed on the surface of the base layer (2) while ensuring the thickness of the base layer (2), despite the base layer (2) being dissolved by the chromate treatment.
4. The process for producing a corrosion-resistant Al-based structural member according to Claim 3, wherein the treatment time t_1 required for the zincate treatment is ≥ 30 s, and the treatment time t_2 required for the chromate treatment is ≤ 15 s.

5. (added) A corrosion-resistant Al-based structural member comprising a base layer (2) adhered to the surface of an Al-based structural member (1₀), and a corrosion-inhibiting coating (3) adhered to the surface of the base layer (2), the base layer (2) comprising Zn, and the corrosion-inhibiting coating (3) comprising a trivalent Cr-containing chromate coating.

6. (added) A process for producing a corrosion-resistant Al-based structural member, the process comprising a step of forming a base layer (2) comprising Zn on the surface of an Al-based structural member (1₀) by a zincate treatment, and a step of forming a corrosion-inhibiting coating (3) comprising a trivalent Cr-containing chromate coating on the surface of the base layer (2) by a chromate treatment using a trivalent chromate agent.

7. (added) The process for producing a corrosion-resistant Al-based structural member according to Claim 6, wherein a treatment time t_1 required for the zincate treatment is set at a value that enables the amount of Zn deposited on the surface of the Al-based structural member (1₀) to be increased to give the base layer (2) comprising Zn having a required thickness, and a treatment time t_2 required for the chromate treatment is set at a value that enables the trivalent Cr-containing chromate coating to be reliably formed on the surface of the base layer (2) while ensuring the thickness of the base layer (2), despite the base layer (2) being dissolved by the chromate treatment.
